Premium Mandibular Advancement Devices

FOR MODERN SLEEP DENTISTRY

Preferred Freedom

A full suite of premium nylon options

We offer two premium options for you to choose from to ensure that you can personalize treatment for every patient. Both of our nylon appliances feature 0.5 mm incremental adjustments and lightweight, metal-free construction.

BEST FIT FOR MOST PATIENTS

Preferred Nylon MAD

The Preferred Nylon MAD is a traction-style advancement system designed to encourage mouth closure during sleep. It supports nasal breathing while minimizing mandibular drop. The lightweight two-piece nylon construction offers exceptional comfort with a completely metal-free design and minimal bulk.

Recommended for patients with

- Mouth breathing tendencies
- TMJ sensitivity
- A need for a durable nylon alternative with greater titration range and adjustability

Freedom Nylon MAD

The dorsal fin push-style mechanism on the Freedom Nylon MAD allows for greater mandibular opening freedom during sleep. This design maintains effective advancement and precise titration capabilities. The lightweight, metal-free nylon design improves patient comfort and allows for easier speaking and drinking compared to traditional appliances.

Recommended for patients with

- A desire for greater jaw mobility
- The need for posterior comfort
- A preference for simplified adjustment capabilities
